About Me

Over the past 5 years, I've built my career as a Fullstack Engineer, mainly working within the PHP (Laravel) and JavaScript stack to deliver web applications and systems for institutional clients. My attention has turned toward Go—diving into its ecosystem by independently building a REST API structured around clean architecture, with Chi handling routing, pgx managing database connections, and sqlc keeping queries type-safe. What defines how I work is adaptability: I move between unfamiliar technologies without hesitation, often using AI-assisted tools as a working partner to learn faster. I'm someone who takes full ownership of what I build and stays committed to growing.

Education

STIKI MALANG

August, 2016 – December, 2020

Bachelor of Informatics Engineering

Thesis : Pengembangan Sistem

Informasi Pemungutan Pajak Reklame Berbasis Website Menggunakan Metode Scrum Pada Badan Pendapatan Daerah Kabupaten Lombok Barat

Working Experiences

Web Developer, Universitas PGRI Adi Buana Surabaya

October, 2020 – Present

- Built and deployed integrated PHP-based web systems—including SPMI and JAJA—improving administrative efficiency and compliance with national education standards, alongside cp-unipasby (the university's company profile site) built with Next.js and isolated Docker containers.
- Set up a GitHub Actions CI/CD pipeline publishing Docker images to GHCR, enabling secure, code-free production deployments while resolving technical issues with 100% SLA compliance.
- Implemented proactive security measures, mitigating multiple web attack attempts and protecting sensitive institutional data, while contributing to a team-built Go API for SIAKAD's SIM AKADEMIK module.
- Regularly built and enhanced features across multiple SIAKAD modules (Akademik, PMB, Keuangan, Litabmas) within the partner's system, supporting evolving data requirements and reducing manual administrative work by 30% through cross-functional collaboration.

Software Developer, Strugg House

November, 2018 – Present

- Designed and engineered reliable web applications and custom systems for diverse organizations using Laravel, JavaScript, and PostgreSQL, focusing on well-structured database architectures.
- Built and deployed the official company profile platform cp-strugghouse using Next.js, isolating the application within Docker containers and setting up automated deployment pipelines via GitHub Actions.
- Developed interactive mobile and web solutions—including accessibility-focused platforms and specialized e-commerce systems—ensuring seamless user experiences and full project ownership from start to finish.
- Adopted modern AI-assisted workflows to rapidly prototype backend modules, accelerate deployment cycles, and efficiently bridge knowledge gaps while managing multiple client project requirements.

Project Experiences

Api Adi Buana (big-api) - Integration Academic

October, 2025

- Designed and architected a backend REST API using Go, following clean architecture principles to separate concerns and ensure maintainability.
- Utilized Chi for lightweight routing, pgx for efficient database connection management, and sqlc to generate type-safe SQL queries.
- Implemented Docker containerization and structured logging to mirror production-grade development standards while pairing with AI-assisted workflows to accelerate system design choices.

Strugghouse (Official Company Profile)

May, 2026

- Built and engineered a responsive, high-performance company profile website for the software house using Next.js for optimized rendering.
- Containerized the application environment using Docker and set up automated deployment pipelines to publish images directly to GitHub Packages.
- Maintained full project ownership from architectural layout to final launch, leveraging AI assistant tools to validate modern front-end integration best practices.

Aplikasi Jembatan (Importer) – API PDDIKTI Integration, Adi Buana

January, 2021

- Designed and built an importer application to automate data integration and reporting with the official PDDIKTI API, reducing manual data entry by 70%.
- Streamlined compliance reporting processes, ensuring faster and more accurate submission of academic data to the government system.

Internal Quality Assurance Information System (SPMI), Adi Buana

January, 2024

- Built a structured and integrated system for managing documents, monitoring, and evaluations, supporting compliance with national accreditation standards.
- Digitized quality assurance workflows, reducing administrative processing time by 40% and improving audit readiness across departments.

Additional Information

Technical & Soft Skills: Golang, Laravel, Flutter, SQL,PGSQL, Spreadsheets, Python, Problem Solving, Attention to Detail.

Certification:	1. TOEIC (score: 420), International Test Center	02/10/2020
	2. Web Developer Level VI , Professional Certification Board of STIKI MALANG	15/09/2020
